1. PRODUCT DESCRIPTION NN02-220

The ALL mXTEND[™] chip antenna component (NN02-220) has been specifically designed for providing multiband performance in wireless devices (particularly in mobile devices), enabling worldwide coverage by allowing operation in the communication standards GSM850, GSM900, GSM1800/DCS, GSM1900/PCS, UMTS, LTE700, LTE800, LTE850, LTE900, LTE1700, LTE1800, LTE1900, LTE2000, LTE2100, LTE2300, LTE2500, and LTE2600.

Material: The ALL mXTEND[™] chip antenna component is built on glass epoxy substrate.

APPLICATIONS

- Handsets
- Smartphones
- Tablets
- Laptop PCs
- Netbooks
- Modules
- Routers
- Smart meters
- Tracking devices

BENEFITS

- High efficiency
- Small size
- Cost-effective
- Easy-to-use (pick and place)
- Multiband behaviour (worldwide standards)
- Off-the-Shelf Standard Product (no customization is required)

The ALL mXTEND[™] chip antenna component belongs to a new generation of antenna solutions based on the Virtual Antenna[™] technology owned by Ignion. The technology is mainly focused on replacing conventional antenna solutions by miniature and standard components.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement N° 674491

2. CLEARANCE LENGTH EXPERIMENTS

2.1 EVALUATION BOARD

This Evaluation Board EB_NN02-220-1B-2R-1P integrates an UFL cable to connect the ALL mXTEND™ chip antenna component with a SMA connector. The experiment consists of reducing the clearance length, going from 45mm (original case) to 25mm.

Clearance Length: 45 mm x 12mm

Clearance Length: 30 mm x 12mm

Clearance Length: 27 mm x 12mm

Clearance Length: 25 mm x 12mm

| Measure | mm |
|---------|---------|
| A | 142 |
| B | 60 |
| C | 45 – 25 |
| D | 12 |

Tolerance: ±0.2 mm

D: Distance between the edge of the PCB and the ground plane.

Clearance Area: C x D. D is fixed meanwhile C varies.

Material: The evaluation board is built on FR4 substrate. Thickness is 1 mm.

2.3 MATCHING NETWORK

The specs of a Ignion standard product are measured in their evaluation board, which is an ideal case. In a real design, components nearby the antenna, LCD's, batteries, covers, connectors, etc. affect the antenna performance. This is the reason why it is highly recommended placing pads compatible with 0402 and 0603 SMD components for a matching network as close as possible to the feeding point. Do it in the ground plane area, not in the clearance area. This provides a degree of freedom to tune the ALL mXTEND™ chip antenna component once the design is finished and taking into account all elements of the system (batteries, displays, covers, etc.).

Please notice that different devices with different ground planes and different components nearby the ALL mXTEND™ chip antenna component may need a different matching network. To ensure optimal results, the use of high Q and tight tolerance components is highly recommended (Murata components). If you need assistance to design your matching network, please contact support@ignion.io, or try our free-of-charge ¹ [Antenna Intelligence Cloud](#) design service, which will get you a chip antenna design including a custom matching network for your

device in 24h¹. Other information related to Ignion’s range of R&D services is available at: <https://www.ignion.io/rdservices/>
